

**As a premier dental lab,  
we strive to offer our clients  
the best quality prosthetics.**

D&S offers a full range of Atlantis suprastructures for removable and fixed prosthetic solutions – for all major implant systems. When a patient’s clinical situation requires a fixed prosthesis, Atlantis Bridge and Atlantis Hybrid provide a foundation to be able to design a safe, long-lasting and natural-looking solution that functions like real teeth.

**Atlantis®**  
Provided by Dentsply Sirona Implants

### Atlantis® Bridge

Atlantis Bridge – available in titanium and cobalt–chrome – is indicated for fixed prosthetics and provides a full-anatomical base for ceramic or composite layering techniques. The final restoration is screw-retained.

### Atlantis® Hybrid

Atlantis Hybrid – available in titanium and cobalt–chrome – is indicated for fixed prosthetics and provides a surface with retention elements to be completed with prefabricated teeth and denture resin. The final restoration is screw-retained.

## Partner with the D&S Implant Team

Overseen by three Certified Dental Technicians with more than 50 years combined experience, our Implant Department is ready to consult on your most difficult cases and can walk you through the entire process. D&S works with all the major manufacturers and has more than 200 implant components in stock.

Toll Free: 800-236-3859  
Fax: 608-849-7500

## Digitally designed based on diagnostic tooth set-up

Atlantis® suprastructures can be utilized for all types of implant-supported structures, for removable and fixed prostheses, including Atlantis Bar and Atlantis 2in1, as well as with different combinations of implant systems within the same case.

Atlantis® Bar

Intended for removable prosthesis on standard or custom bars. An extensive library of attachment provisions and bar profiles is available. Made by milling.

Atlantis® 2in1  
(bridge and hybrid)

Intended for removable prosthesis. The primary structure is a custom bar and the secondary structure can either be a bridge or a hybrid. The secondary structures are suitable for acrylic layering (bridge) or using acrylic denture teeth with individual support for each tooth (hybrid). Made by milling.

## Optimal positioning of the screw access channel improves esthetics and makes handling easier.

Angling the screw access channel allows the screw access hole to be optimally positioned, improving the function and esthetics of the Atlantis Bridge and Atlantis Hybrid restoration. The channel can be angled up to 30 degrees off the implant/abutment axis.

## Easier handling – optimized screw head and screwdriver design

Every connection with angulated access is supplied with a specially designed Atlantis suprastructure prosthetic screw. Accompanying the screw(s) is a hexalobular screwdriver that simplifies engagement and ensures insertion and rotational forces are applied perpendicularly to the screw axis.

## Comprehensive warranty

By choosing Atlantis, you can be assured that the prosthetic solutions you receive are of the highest quality, safety and reliability.

This is why Atlantis patient-specific prosthetic solutions come with an exclusive and industry-leading comprehensive warranty program.\*

\*Subject to the terms and conditions of the Atlantis warranty.
