

DENTAL SLEEP MEDICINE FOR OBSTRUCTIVE SLEEP APNEA

Treatment of sleep disorders continues to be one of the fastest growing fields in medicine.

As Obstructive Sleep Apnea becomes more common in today's society, you have the unique opportunity to significantly improve the lives of your patients who are suffering every day. As well as adding a valuable service to your dental practice that provides an additional source of revenue.

Untreated, sleep apnea can cause high blood pressure, memory problems, cardiovascular disease, weight gain, headaches, and several other symptoms that affect your patient's day to day lives. It may also be responsible for job impairment and motor vehicle collisions. Fortunately, you can treat your patients for sleep apnea right in your office! D&S offers several mandibular repositioning devices for dentists to help their patients.

This is a great opportunity to branch out from traditional dentistry and stay on the cutting edge of medicine, while offering an alternative option to a CPAP machine for your patients.

Products manufactured by Crane Dental Laboratory and distributed by D&S Dental Laboratory.

D&S Dental Laboratory now offers Mandibular Repositioning Devices to help treat your patients!
