

Locator Flow Chart: Retrofit Current Denture

*** Pick up in the morning counts as first day in lab; pick up in the afternoon counts as next day in lab*

First Appointment

- Remove healing abutment – measure depth of tissue, from the top of the prosthetic head (buccal, mesial, distal, lingual)
- Use this measurement to order abutments and attachments
- Replace healing abutments (3 days in lab)

Second Appointment

- Remove healing abutment
- Place locator abutments using a locator tool - torque in place per manufacturer's recommended Ncm
- Relieve inside of denture to accommodate abutments
- Take reline impression through entire denture base, using the metal housing and black insert
- Use of an impression coping is not recommended
- If replacing healing abutments, pay special attention to abutment location if abutments are differing lengths
- Send impression with housings and all retentive males to lab (1 day in lab)

Third Appointment

- Deliver denture

*** Reline will be returned with a 3.0 lb. pink retentive male unless specified. The clear 5.0 lb. and the blue 1.5 lb. are also included.*
